DATA SUBMISSION RULES

A district's data are validated against business and field validation rules to verify that all required data category types have been submitted. The data submission specifications found above refer to the submission(s) in which the data category type is required or allowed. The data category type may not be reported in any submission other than that specified.

A district's data are validated against business and field validation rules detailed below to verify that the data is complete, reasonable, meaningful, and accurate. Each business rule has the following indicators shown:

- **Error level**: Indicator of the severity of the error where F = fatal, S = special warning, and W = warning.

- **TSDS**: Indicator of whether this rule applies to data for a TSDS submission.

- **ECDS**: Indicator of whether this rule applies to data for the Early Childhood Data System (ECDS) submission.

- **PEIMS Sub**: Indicator of the PEIMS submission(s) to which this rule applies, where 1 = Fall, 2 = Mid-Year, 3 = Summer, and 4 = Extended Year.

- **Rule Applies To**: Indicator of the organization types to which this rule applies, either ESC, District, Campus, and/or Charter. If a rule applies to an organization type, that column will contain an "X". If a rule does NOT apply to an organization type, that column will be blank.

PRE-LOAD AND LOAD VALIDATION RULES

The PEIMS Data Standards XML schema ensures that the data files from school districts adhere to a common structure and consist of valid elements and attributes. An XML extract file must be syntactically perfect or it is rendered as unacceptable by an XML parser.

Restrictions control acceptable values for XML data elements. In combination with an element's declared data type, restrictions enable the XSD validation process not only to validate the structure of the XML file but also to validate the data values contained within the file against its XML schema definition. The XML schema also enforces length restrictions for a given element by either an exact length, minimum length, or maximum length. Many simple type elements within the PEIMS XSD have a restriction that limits the domain of acceptable values.

Data Element General Field Validation Rules

Data element fields are validated against their data element descriptions as provided in Section 3 according to these general field validation rules:

- **Data Type**

  o   Numeric data type elements must contain numeric characters and not have leading spaces.

  o   Name Field and Coded data type elements must contain only the characters listed with those data types in Section 3.

  o   Coded data type elements that contain a value must not contain any blanks within the value.

- **Domain** - If the element has a domain of values specified in Section 3, the reported value must fall within the specified domain.

- **Pattern** - For each individual position of the data element, the reported value must contain only the data type and characters allowed by the defined pattern.

- **Code Table** - If an element has a code table, the reported value must be in the specified code table.

Data Category Type Field Validation Rules

Data category types are validated against their complex type definition to ensure uniqueness and completeness according to these rules:
- Fields that have been specified as the unique identifying key will be used to verify that no duplicate keys are reported.
- Fields that have been specified as mandatory will be verified so that none are blank.

BUSINESS CONTEXT RULES

Incoming data will be verified for business context. Some context rules compare data element fields within a single data category type item, while others compare data element fields across different data category types. Finally, some context rules evaluate data that is aggregated in some way (summed, averaged) with thresholds or other criteria. The following pages list specific business context rules that apply to the data category types, the purpose of which is to provide for both the integrity of the database and compliance with data standards.

Staff - Payroll Context Rules

Staff Payroll Calculated Values

Full Time Equivalents (FTEs) are calculated in the following manner:

If NUMBER-DAYS-EMPLOYED is greater than or equal to 187 then FTE = PERCENT-DAY-EMPLOYED divided by 100.

If NUMBER-DAYS-EMPLOYED is less than 187, then FTE =

$$\frac{\text{(PERCENT-DAY-EMPLOYED divided by 100) X (NUMBER-DAYS-EMPLOYED)}}{187}$$

Base Salary is the total of all PAYROLL-AMOUNTs where PAYROLL-ACTIVITY-CODE is 80.

FTE Salary is Base Salary divided by FTE.

Student - Basic Information Context Rules

September 1, 2018 Age Calculation Algorithm for Students

If the Birth Year is either of the calendar years spanned by the school year, then calculated Age is 0.

Otherwise, the Birth Year is subtracted from 2018 resulting in the Age. The Age is then adjusted for the month and day to get September 1 Age.

- If the Birth Month is Before September, then no adjustments are needed.
- If the Birth Month is After September, then 1 is subtracted from the Age.
- If the Birth Month Is September and the Birth Day is after the first, then 1 is subtracted from the Age.
- If the Birth Month Is September and the Birth Day is the first, then no adjustments are needed.

Unless otherwise specified in a rule, Age refers to September 1 Age.

Special Note about Attendance Context Rules

Due to the complex nature of attendance reporting, certain assumptions must be made so that each rule is performed uniformly throughout the submission, based on the wording of the rule. Depending on the wording, the rule will perform the evaluation based on data reported on one individual item, aggregated data reported on more than one item, data across data category types, or any combination of the three. The following wording assumptions apply to attendance rules.

"For each instance of STUDENT-ID" - This wording limits the rule to one individual attendance item.

"For a particular" - This wording will cause the rule to search for all attendance items with identical values for the specified element(s), add the attendance data if applicable, then perform the evaluation.

"Matching" items - Rules which refer to "matching" elements/items will compare data across related data category types (Special Education Attendance item to an Attendance item, etc.). The items are related when they contain identical values for certain data element fields in each item. The type of Special Programs Reporting Period Attendance is identified based upon ATTENDANCE-EVENT-INDICATOR. The following two situations occur:

1. Some items are related based on identical values for specified element(s).

2. If no element(s) is specified, the items are related based on identical values for six elements from the key of each items (DISTRICT-ID, TX-UNIQUE-STUDENT-ID, CAMPUS-ID-OF-ENROLLMENT, INSTRUCTIONAL-TRACK-INDICATOR-CODE, REPORTING-PERIOD-INDICATOR-CODE, and GRADE-LEVEL-CODE), as well as ATTENDANCE-EVENT-INDICATOR as needed to identify the appropriate data from Special Programs Reporting Period Attendance.
   For example, when a Special Education Attendance rule refers to a "matching" Attendance data item, data from the Special Education Attendance data item will be compared to data from the Attendance data item that contains identical values for the 6 key fields listed above.
